

## OUR COMMITMENT

Sustainable, Certified, and Green are three critical words that define an environmental movement and one that stimulates the demand for more eco-sensitive products throughout every industry.

Cummings is committed to supporting sustainable forestry, believing it is the key to protecting the environment and natural resources our industry depends upon. Our incoming logs are harvested and processed by people who embrace sustainable, environmentally sound practices.

Cummings forestry professionals adhere to federal, state, and local regulations regarding timber harvesting and always consider landowner goals as the foundation to every harvest plan. These are long standing relationships that allow us to work together to continually improve those best practices. Good stewardship demands continuous improvement. Through these continued efforts, Cummings is doing its part to be an environmental leader in the community and lumber industry.

## OUR STORY

Lee William Cummings moved to Troy, PA in 1929 to found L.W. Cummings & Son Lumber Company. Because there was no electricity in Troy at that time, he built his mill close to a railroad and spring and used steam engines for power. Logs were skidded with horses and lumber was shipped on rail cars.

Today Scott Cummings, the founder's great grandson, directs the company. The lumber company has prospered through the years thanks to its undying commitment to provide customers with quality service and a quality product. For four generations, that commitment to quality has become a Cummings family tradition.
